Art Unit: 2828

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claim 8 has been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hrovat et al. (5271027) in view of Canfield et al. ('5432604).

Hrovat discloses in Fig. 2 a ring laser 10 including gas discharge tube comprising a block (frame of the discharge tube), wherein a cathode 12 engaging the block and biased at a potential lower than ground; and an anode 14/16 engaging the block and biased at a higher potential than ground. However, Hrovat does not explicitly disclose the block being maintained at a reference potential which is substantially ground. Canfield discloses that in a typical application, the mouting device is used to mechanically attach the ring laser gyroscope body to a chassis or system block, which is mounted to the device for which rotations are to be measured. In some

Art Unit: 2828

applications the mounting device is mechanically dithered to the rotation rate is near zero. The mounting device is typically formed of a metal and is electrically grounded (col. 1, lines 33-40). Canfield further teaches that the typical intensity signature is not observed for ring laser assemblies that are not connected to the electrical ground. The typical intensity signature is observed for ring laser asssemblies out of the case with a grounded flexure installed. For the improvement of the gas discharge tube in particular and the gas laser in general, it would have been obvious to the one having ordinary skill in the art at the time the invention was made to ground the frame/body/block of the gas discharge tube as taught by Hrovat as suggested by Canfield with the reason as indicated above.

Allowable Subject Matter

Claims 10, 12, and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-7 and 15-26 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2828

Communication Information

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Nguyen whose telephone number is 571-272-1947. The examiner can normally be reached on 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, MINSUN HARVEY, can be reached on 571-272-1835. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
